Pressure ratings are for water, non shock @ 23°C. Threaded pipe requires a 50% reduction in pressure rating. Max service temperature for CPVC pipe is 93°C, pressure rating is reduced at elevated temperatures. Pressure ratings above are for CPVC Pipe Type IV, grade 1, cell classification 23447 to ASTM D1784, fittings, valves & flanges have pressure ratings significantly lower than pipe & must be considered in the pressure rating of the complete system. Chemical compatibility should be considered as some chemicals will affect pressure rating.

**CPVC pipe systems are not suitable for use with compressed air or gas, explosive failure may cause death.**
